DETAILED ACTION

Response to Amendment

1. The amendment filed on 12 June 2007 has been accepted and entered.

Response to Arguments

2. Applicant's arguments, see amendment filed 12 June 2007, with respect to the rejection(s) of claim(s) 1-10 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Chappo *et al.* (6,510,195).

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-4, 6, 7, 9, and 10 are rejected under 35 U.S.C. 102(e) as being anticipated by Chappo et al. (6,510,195).

With respect to claim 1-4, Chappo *et al.* shows an imaging module (Fig. 12) comprising a substrate, an array of sensor elements (52) formed (via bump bonds, abstract) on one side of a substrate (58), and at least one electronic processing module mounted (claim 19) on a side of the substrate comprising an

Art Unit: 2884

analog-digital converter, multiplexing circuitry and amplification circuitry (ASIC, claim 20).

With respect to claim 6, Chappo shows sensor elements to extend to three sides of a substrate (Fig. 2B).

With respect to claim 7, Chappo shows connecting the electronic module to the substrate via wire-bonding (wire bonds, 74).

With respect to claim 9, Chappo shows the radiation detector to be sensitive to X-radiation (abstract).

With respect to claim 10, Chappo shows the use of the radiation detector in an imaging device (Fig. 2C).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 5 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chappo *et al.* (6,510,195), in view of Kyyhkynen (6,403,964).

With respect to claims 5 and 8, it would have been obvious to one of ordinary skill in the art at the time the invention of Chappo was made to form an ASIC out of crystalline silicon, as this is well-known and common in the art.

Kyyhkynen is cited as an example of using a crystalline silicon ASIC for use as an electronic component in an imaging system (column 8, lines 28-36).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark R. Gaworecki whose telephone number is (571) 272-8540. The examiner can normally be reached on Monday through Thursday, 7:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Porta can be reached on (571) 272-2444. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
